Course Description

Methodologies of psychotherapy are the focus of this course. They are examined from 3 perspectives: (a) qualities and skills of the practitioner, (b) overall strategy: as shaped by philosophy and goals, and (c) specific techniques. Over 10 different approaches of psychotherapy are covered, including traditional, contemporary and emerging ones.

The grading scheme aims to create an opportunity for deeper study, primarily by distributing class work throughout the course. There is an assignment for every class, weekly journal entries, 2 exams, a presentation, and a paper.

Course Objectives

Students are expected to gain:
• familiarity with the major psychotherapeutic methodologies practiced today.
• acquaintance with a variety of specific techniques.
• appreciation of the place and role of the practitioner in the psychotherapeutic process.
• understanding of the connection between the methodology that is employed and the psychotherapeutic philosophy and goals that shape it.

- If the student expects to miss a quiz in advance, he or she has to apply for a make-up exam before making arrangements to be elsewhere.

Use of laptop and other electronics in the classroom
is acceptable for special needs situations only.
